

2016-02 Erection of the Killingworth Fire Training Facility

ADDENDUM 1

4/13/16

Questions submitted 4/13/16:

1. The drawings show concrete poured on the second floor. Should this work be included in my bid or will it be done by the contractor who did the foundation?

The concrete on the second floor will not be required of the erection bidders. That will be done at a later date. We don't need the concrete, but designed the building to support it if we find out later that we want it.

2. The specifications say that we will be responsible for final grading of the site. Would it be possible to get any more information on this? Or is there a site plan? I would like to know if we will be responsible for importing or exporting any material for the final grading of the site and how much work is expected for this aspect.

No, final grading will be done by our excavation contractor, not the erection bidders.
